

Client Satisfaction Guarantee

# Message from CEO

Technology is revolutionizing everything around us allowing consumers and businesses to operate faster and better, businesses who adapt fast to such rapid changes have higher probability in staying at the top of the lead while those who adapt slow will stay very far behind.

The MENA region is rich in both human and natural resources promising potential opportunities to improve people's lives through innovative solutions based on new technologies such as big data, business intelligence, artificial intelligence, block chain , IoT , Fin-tech and more.

Infratech has laid out its mission to empower the region with innovative integrated solutions as part of its contribution to the transformation in the region, heading towards the digital landscape to achieve better KPIs and taking the region to greater levels in transparency, competitiveness, investments, attractiveness and consequently the living standards.

Therefore, we continue at Infratech to invest heavily on technology and our human capital to stay always in front and to contribute actively in leading the technology revolutions across the region.

**IT** Infrastructure

# IT Infrastructure

## Infrastructure Consultancy

*Infratech leverages its cross-domain expertise to help enterprises craft business-specific IT infrastructures, which helps drive efficiency across the organization. Starting from the roadmap creation, solutions competitive analysis to choosing the right product, Infratech can explore the best alternatives for each specific case.*

## Data Center

*Today, data forms the core of any business. Infratech helps ensure that your data repositories are in top shape by helping design, deploy and maintain key data center components. Whether the client needs a single Data Center or distributed multiple data centers, Infratech data centers solutions will definitely fulfill the right needs of each client with the right Tier.*

## Cloud

*Infratech helps enterprises reduce costs and drive efficiencies by shifting workloads from legacy infrastructure to public, private or even hybrid cloud in a sustainable manner. Infratech clouds solutions fulfill every specific needs of each client through its multiple options of local and global cloud solutions which satisfy the highest availability and reliability standards.*

## Network Functions Virtualization

*By decoupling and migrating key functions to virtual servers, we help network operators transform their architecture, reduce costs, and revolutionize service delivery. Infratech expertise will explore the best options for each client and propose the best combinations which properly fits the exact needs of the client.*

## IT Optimization

*Supercharge your enterprise IT, reduce risks, increase performance and availability with Infratech's state-of-the-art, expert-led IT optimization services.*

**IT** Security

# IT Security

## IT Security Consultancy

*Our IT security advisory comes with the expertise of seasoned professionals who provide end-to-end solutions that are custom built to fit your specific needs. As your advisors in IT security, we will help you build an ironclad security strategy while enabling your infrastructure to protect itself from known threats and keep your confidential data secure. We also help you ensure IT security compliance according to International standards.*

## IT Infrastructure Security

*Infratech helps organizations protect their valuable infrastructure as they are a frequent mark for cyber terrorists and hackers. Security of public and users' data is of paramount importance and our cyber security team ensures your repositories remain unharmed by means of industry best practices, knowledge of emerging cyber attack trends, and cutting-edge technologies.*

## Incident Response & Forensics Investigation

*We are ready to provide clients in-depth data forensics, investigating the root-cause of the breach and its pathways. Our partnership with some of the leading incident response and threat hunting vendors allows us to deeply audit affected infrastructures, networks, hidden data, and metadata. Our data forensics services also include reverse engineering and malware analyses.*

## Managed Security Services/SOC

*We can take over charge of providing ironclad security services to your infrastructure with our SOC-as-a-service programs. While you take care of your operations, we will monitor your networks 24/7 with next-generation security measures in place and regular network audits for incredibly affordable prices.*

## IT Security Training & Awareness Program

*Our team of IT security training experts designed a number of training and awareness programs to help clients deliver appropriate education to their employees with regard to their role in keeping your IT infrastructure safe. Each program is focused on an important aspect of this domain and trains your teams to be a safe user, do not fall for traps, and act smartly during a security crisis.*

**Digital** Transformation

# Digital Transformation

## Consultancy

*Infratech's approach uses its expertise in merging business and technology allowing seamless digital transformation starting from strategy creation to the final implementation phase. We cover the important aspects including customer experience and marketing, digital business design, digital organization, digital technology strategy, business analytics and data science, and governance, risk and compliance.*

## Digitization

*Transform your business from the legacy paper-based environment to the agile digitally automated processes and deliver customized communications across all channels with ease. Infratech is dedicated to investing in cutting edge digitization services for our esteemed clients as we continue to deploy solutions that adapt to a multitude of applications and requirements.*

## Smart Data

*Infratech helps businesses follow the right approach enabling them to be more powerful in making the right decisions and therefore staying more competitive in the market, working towards this goal requires Business Intelligence to run the right analytics and present it to the end users in a digestible way. If you desire to move to higher level of smartness, Artificial Intelligence is the right roadmap for you, AI can automate the analytics, facilitate the self-learning approach and help in smart decision making.*

## IoT

*Infratech enables the organizations to transform their business into higher levels of agility by delivering innovative IoT powered solutions. Infratech IoT solutions integrate all the recent enablement technologies of sensing capability, connectivity, powerful processing, analytics tools as well as the artificial intelligence to provide an end-to-end IoT solution. Infratech IoT solutions power various sectors including industrial, health, transportation, retail, logistics, education, security and defense.*
